(54) Title: OPTICAL SHEET FOR A DISPLAY APPARATUS, METHOD OF MANUFACTURING THE SAME AND DISPLAY APPARATUS HAVING THE SAME

(57) Abstract: In an optical sheet (400) for a display apparatus, capable of improving luminance of a display image and a display quality, a method of manufacturing the same and a display apparatus having the same, the optical sheet (400) including a first medium (410) and a second medium (420) is disposed on a light pathway (430). The first medium (410) has a first reflective index. The second medium (420) has a second reflective index that is lower than the first reflective index. The optical sheet (400) is disposed between the display unit (200) and a backlight unit (100) or disposed on the display unit. The optical sheet (400) transmits a light without diffusion or loss of luminance. The light is generated from the backlight unit (100). The optical sheet (400) disposed on the display unit (200) scatters external light so as to display the image in high quality.
